

PROFESSIONAL SUMMARY

- 5.7 years of experience as a Data Engineer specializing in **Azure Cloud**, with a focus on designing, developing, and deploying scalable and efficient data pipelines.
- Designed, developed, and maintained scalable ETL/ELT pipelines using **Azure Databricks, PySpark, and Azure Data Factory (ADF)** to ingest, transform, and curate data across the **Medallion Architecture (Bronze, Silver, Gold, Platinum)**.
- Designed and implemented **Databricks Lakehouse** architecture using **Delta Lake, Unity Catalog**, and Medallion (Bronze, Silver, Gold) layers to build scalable, secure, and high-performance data pipelines.
- Developed and optimized ETL/ELT workflows in **Databricks Lakehouse** using **PySpark**, Delta Live Tables, and Delta Lake features (MERGE, Time Travel, Auto Loader), improving data quality, pipeline performance, and governance.
- Integrated Microsoft SharePoint with ADF and Databricks to ingest Excel, CSV into Azure data lake storage Gen2 for downstream processing.
- Built batch and real-time data ingestion pipelines using **Spark Structured Streaming, Auto Loader, and CDC mechanisms** to process structured, semi-structured, and unstructured data from multiple enterprise data sources.
- Developed and optimized **Delta Lake** data models for analytics, reporting, and AI-ready datasets by implementing **partitioning, OPTIMIZE, Z-Ordering, Liquid Clustering, file compaction, and query performance tuning** techniques.
- Implemented **Unity Catalog** to manage catalogs, schemas, tables, external locations, and volumes, ensuring centralized governance, secure data access, and regulatory compliance.
- Configured and managed **external locations and ADLS Gen2 storage** to provide secure, governed access for enterprise data platforms.
- Designed and implemented **metadata, audit, and operational control frameworks** to capture pipeline execution history, data lineage, record counts, data quality validations, exception handling, and reconciliation metrics, improving observability and compliance.
- Developed comprehensive **data quality frameworks** with automated validation rules, schema enforcement, duplicate detection, null checks, and business rule validations to ensure high-quality data delivery.
- Leveraged **Delta Sharing** to securely share curated datasets across business teams while maintaining governance and controlled access.
- Built reusable and scalable **Delta Lakehouse** data models to support enterprise reporting, advanced analytics, AI/ML workloads, and Power BI dashboards.
- Optimized Spark applications by improving partition strategies, minimizing data shuffling, tuning joins, caching frequently accessed datasets, and optimizing cluster utilization for enhanced pipeline performance.
- Developed and scheduled automated workflows using **Databricks Workflows, Jobs, and Databricks Asset Bundles**, enabling seamless CI/CD deployments across development, testing, and production environments. Version control system **GIT** and **BITBUCKET**. Deployment I am using **AZURE DEVOPS** tool
- Integrated data from enterprise applications, cloud storage, APIs, databases, and streaming platforms into Azure Databricks using scalable ingestion frameworks.
- Collaborated with business analysts, data scientists, BI developers, and product teams to understand business requirements and deliver reliable, analytics-ready datasets.
- Performed root cause analysis, troubleshooting, and performance tuning for production data pipelines,

ensuring high availability and timely issue resolution.

- Followed **Agile/Scrum** methodologies, actively participating in sprint planning, backlog grooming, code reviews, testing, deployment, and production support activities.
- Collaborated with **BI** teams to develop and deliver optimized, analytics-ready datasets for Power BI dashboards and reports, enabling data-driven business decision-making. Creating dash boards on BI
- Knowledge on informatica power center, Unix, Power BI, IICs

SKILLS

- **Cloud Platforms:** ADLS Gen2, Azure Blob, Azure Data Factory, Azure Databricks, Azure Functions, Azure Asset Bundle
- **Data Engineering:** ETL/ELT processes, data pipeline orchestration, data warehousing
- **Data Processing:** PySpark, Apache Airflow, Snowflake, Apache Kafka
- **Programming & Scripting:** Python, PySpark, SQL, Spark SQL, Structured Streaming, Apache Kafka, JSON, Parquet
- **Data Governance & Compliance:** Data lineage, data quality, security, and regulatory requirements
- **Version Control:** Git, Bitbucket
- **SharePoint:** Microsoft SharePoint
- **Databricks Lakehouse:** Delta Lake, Unity Catalog, Medallion, ETL/ELT workflows, Pyspark
- **Project Methodologies:** Agile/Scrum (collaboration, requirement analysis, sprint planning, testing)
- **DataBricks:** Unity Catalog, Delta Lake, Databricks Workflows, Databricks Jobs, Databricks Asset Bundles, Delta Tables, External Locations, Volumes
- **Database:** Snowflake, MySQL, Azure Synapse Analytics
- **Data Governance:** Data Lineage, Data Quality, Data Validation, Metadata Management, Access Control, Data Security
- **DevOps & Version Control:** Git, GitHub, Bitbucket, CI/CD
- **Visualization & Reporting:** Power BI
- **Methodologies:** Agile, Scrum

EDUCATION DETAILS

- Highest : MBA _ Finance marketing (2016)
- UG : BSC (MSCs) (2013)

COMPANY DETAILS

- YUM BRANDS (15 sep 2025 to 4 mar 2026)
- TCS (18_june_2020 to 22 aug 2025)

PROJECTS

PROJECT 3

Title : KFC (15 sep 2025 to 4 mar 2026)

Role : Senior Data Engineer

Technologies : Python, PySpark, SQL, Azure Data bricks, Unity catalog, Azure blob storage, ADLS,

Description

KFC is a global fast _food chain specializing in fried chicken, operating thousands of stores worldwide and offering dine _in ,takeaway, and mobile app ordering services. The goal of this project is to transform unstructured customer reviews into actionable business insights using Azure Data bricks, Delta lake, and AI _driven sentiment analysis.

Roles & Responsibility

- .Developed scalable ETL pipelines in Azure Databricks to ingest and process customer review data from iOS and Android APIs.
- Implemented Medallion Architecture using Delta Lake (Bronze, Silver, Gold).
- Using asset bundle we have deploy dev to prod
- Optimized Spark jobs and managed data governance using Unity Catalog.
- Built Power BI dashboards to deliver store-level and region-level customer insights.

PROJECT : 2

- Title : Optum Healthcare (17 oct 2022 to 22 aug 2025)

Role : Senior Data Engineer

Technologies : Python, PySpark, SQL, Azure Data bricks, ADF, Azure blob storage, ADLS, Git Hub, ci/cd,databricks lakehouse,Sharepoint

Description

Optum Healthcare India has been at the forefront of revolutionizing healthcare delivery since 2002. As a Digital Healthcare Solutions Developer, I have been part of a dynamic team dedicated to bringing every aspect of healthcare together to provide individuals with a complete view of their health. Our mission is to provide personalized insights to guide decisions, making healthcare experiences easier and more accessible for everyone

Roles & Responsibility

- Involving in requirements gathering, analysis, and designing of the systems
- Implementing ETL using Azure Synapse Analytics (SQL Data Warehouse)/Azure Data Factory
- Working on converting Hive/SQL queries into Spark transformations using Azure Databricks
- Automated data loading and transformation processes in **Snowflake** using Snowpipe and stored procedures, reducing manual intervention and increasing efficiency.
- Worked with Spark Ecosystem using Hive Queries on different data formats like a Text file and parquet.
- Importing data from Azure Data Lake Storage (ADLS)Gen 2 into Azure Databricks, Performed transformations and actions on Azure Databricks
- Using Azure services like Azure Virtual Machines and Azure Blob Storage for small data sets processing and storage working with JSON files from Azure Blob Storage
- Chosen and produced information into csv records and put away them into Azure Blob Storage by utilizing Azure Databricks and afterward organized and put away in Azure Synapse Analytics (SQL Data Warehouse)

- Optimized SharePoint data ingestion by implementing incremental processing, reducing execution time and improving pipeline performance.
- Developing Azure Data Factory Pipelines to read data in csv format in raw layer and write data to parquet formatting the publish layer
- Developed and scheduled automated workflows using **Databricks Workflows, Jobs, and Databricks Asset Bundles**, enabling seamless CI/CD deployments across development, testing, and production environments. Version control system **GIT** and **BITBUCKET**. Deployment I am using **AZURE DEVOPS** tool
- Extract Real-time feed using Kafka and Spark Streaming and convert it to Azure Databricks and process data in the form of Data Frame and save the data as Parquet format in ADLS. We Developed interactive POWER BI dashboard and reports using data from Azure databricks and ADLS to deliver business insights and analytics.

- Well-versed with Agile, SCRUM, and Test-driven development methodologies

• PROJECT : 1

- Title : Financial Data Analysis (**18_june_2020 to 5 aug 2022**)
- Role : Data Engineer
- Technologies : Python, PySpark, Data Bricks, Azure blob, Key Vault, Azure functions, Logic Apps, Clusters, Azure Monitor & logging, Power BI
- **Description**
- This project aims to develop a data analytics platform for banks and financial institutions dealing in credit cards to better understand and manage credit card exposures, including spending behavior, payment patterns, and fraud indicators. The platform will leverage advanced statistical and machine learning algorithms, integrating various data sources to perform predictive modeling, forecast trends, and optimize product offerings and pricing. Real-time monitoring and alerting features will enable quick response to fraudulent or high- risk activities. The platform will be scalable, secure, and user-friendly, with a flexible and customizable interface designed to meet evolving needs using agile methodologies
- **Roles & Responsibility**
- Design and implement data pipelines to extract, transform, and load (ETL) data from various sources into Azure data storage services such as Azure Blob Storage, Azure Data Lake Storage (ADLS), or Azure SQL Database.
- Develop and maintain PySpark scripts and Azure Databricks notebooks to process and transform large-scale datasets in a distributed computing environment.
- Optimize data pipelines for performance, scalability, and reliability by tuning configuration settings, monitoring resource utilization, and troubleshooting issues in Azure Data Factory and Azure Databricks.
- Develop and maintain data catalogs and metadata repositories to document data lineage, data quality, and data usage using Azure Data Catalog.
- Participate in code reviews and code refactoring activities to ensure adherence to coding standards, best practices, and security guidelines within Azure environments.
- Develop and maintain automated testing frameworks and unit tests to validate the functionality and quality of data pipelines and ETL jobs in Azure Data Factory and Azure Databricks.
- Implement data governance policies and procedures to ensure data integrity, security, and compliance across all Azure data services.
- Collaborate with data analysts and business stakeholders to understand data requirements and deliver optimized data solutions.
- Provide training and support to team members on Azure data engineering tools and best practices, fostering a culture of continuous learning and improvement.

DECLARATION

I hereby declare that all the above-furnished details are true to the best of my knowledge.
